Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3, 5, 28, 29, 49-54 and 61-66 rejected under 35 U.S.C. 103(a) as being unpatentable over Economoto

Economoto discloses a network photograph service system (see fig. 1, digital print ordering system) having at least one laboratory server 12 (photofinisher/photo-lab) installed in one of a plurality of laboratories (see fig. 1, col. 5, II. 57-65), picture printers 15-17 (see fig. 1, digital printers, 15, 16, col. 3, II.13-40) communicating via a network 23, (see fig. 1); as in claim 2, wherein the database further includes a function of transmitting information to the laboratory server 12 regarding one of plurality of templates specified by a request to the laboratory server when printing service process using the using the template is requested by a customer (see col. 61 II. 10-18), and wherein the laboratory server generates a processed print using the template, based the transmitted information (see col. 5, II. 66 to col. 6, 11.42, particularly col. 6, II. 10-18),

Enomoto discloses a database 24 that is connected with the laboratory server a plurality of templates specified by a request to the laboratory server when printing service process using the template is requested by a customer (see col. 5, II. 66 to col. 6, II.42, particularly col. 6, 10-18). Enomoto fails to disclose a central server. Mayle discloses a central server (web server) that can be used to transmitted digital photography over a network (see Mayle col. 4, Ilo 6-50). It would have been obvious for an artisan at the time of the invention of to recognize the advantage of the internet to provide a mode of remotely exchanging electronic/digital information. One of ordinary skill in that art would also know that the Internet is connected by servers which supply digital information and/or servers to users. Since Enomoto contemplates the use of a network 23 to remotely exchange electronic information, it would have been obvious to modify Enomoto with the server and network Mayle so as to exchange electronic information over a widely used network. Thus such a modification would provide convenience to the user to remotely exchange electronic/digital images and other electronic information as well as remotely provide various services. Thus such a modification would have been considered an obvious expedient well within the ordinary skill of the art.
